## WHAT IS CLAIMED IS:

1. A PPG phosphoramidite comprising a photolabile hydroxy protecting group, wherein said phosphoramidite nucleoside is of the formula:

wherein

R<sup>1</sup> is selected from the group consisting of hydrogen and alkyl;

R<sup>2</sup> is selected from the group consisting of hydrogen, alkyl, and an amine protecting group, or R<sup>1</sup> and R<sup>2</sup> together form an amine protecting group;

each of  $Z^1$ ,  $Z^2$ ,  $Z^4$ , and  $Z^6$  is independently selected from the group consisting of hydrogen, halide, alkyl,  $-OR^{11}$ , wherein each  $R^{11}$  is independently selected from the group consisting of hydrogen, alkyl, and a hydroxy protecting group or two  $R^{11}$  groups form a diol protecting group, or  $Z^2$  and  $Z^4$  together with the carbon atoms to which they are attached and C-3 carbon atom of the carbohydrate ring form a five-to seven membered ring; and

one of  $Z^3$  or  $Z^5$  is  $-OR^{12}$  and the other is  $-OR^{13}$ , where  $R^{12}$  is a photolabile hydroxy protecting group and  $R^{13}$  is a phosphoramidite.

2. The PPG phosphoramidite according to Claim 1 of the formula:

wherein

 $R^1$ ,  $R^2$ ,  $Z^3$  and  $Z^5$  are those defined in Claim 1.

- 3. The PPG phosphoramidite according to Claim 2, wherein  $Z^3$  is  $-OR^{13}$  and  $Z^5$  is  $-OR^{12}$ , where  $R^{12}$  and  $R^{13}$  are those defined in Claim 1.
- 4. The PPG phosphoramidite according to Claim 3, wherein the photolabile hydroxy protecting group is selected from the group consisting of α-methyl-6-

nitropiperonyloxycarbonyl, 2-(2-nitrophenyl)-2-methylethoxycarbonyl, 2-(2-nitro-6-chlorophenyl)-2-methylethylsulfonyl, and 3',5'-dimethoxybezoinoxycarbonyl.

- 5. The PPG phosphoramidite according to Claim 4, wherein R<sup>1</sup> and R<sup>2</sup> together form an amine protecting group.
- 6. The PPG phosphoramidite according to Claim 5, wherein  $R^1$  and  $R^2$  together form an amine protecting group of the formula: =CH-N(CH<sub>3</sub>)<sub>2</sub>.
- 7. A process for producing a non-halogenated nucleoside base containing nucleoside comprising:
- (a) contacting a halogenated nucleoside base with an activated sugar under conditions sufficient to produce a halogenated nucleoside base containing nucleoside; and
- (b) reducing said halogenated nucleoside base containing nucleoside under conditions sufficient to produce said non-halogenated nucleoside base containing nucleoside.
- 8. The process of Claim 7, wherein said non-halogenated nucleoside base containing nucleoside is purified by recrystallization.
- 9. The process of Claim 7, wherein the yield of said non-halogenated nucleoside base containing nucleoside from said halogenated nucleoside base is at least about 50%.
- 10. The process of Claim 7, wherein said halogenated nucleoside base containing nucleoside reducing step comprises hydrogenation of said halogenated nucleoside base containing nucleoside in the presence of a hydrogenation catalyst.
- The process of Claim 7, wherein said non-halogenated nucleoside base containing nucleoside is used in a synthesis of a phosphoramidite nucleoside.
- 12. The process of Claim 11, wherein said phosphoramidite nucleoside is used in a synthesis of an oligonucleoside or an oligonucleotide.
- 1 13. A process for producing a nucleoside comprising a
- 2 hydropyrazolopyrimidine nucleoside base, said process comprising hydrolyzing and reducing
- 3 or reducing and hydrolyzing an iodopyrazolopyrimidine nucleoside of the formula:

6 under conditions sufficient to produce a hydropyrazolopyrimidine nucleoside of the formula:

9 wherein

group; and

10 R<sup>1</sup> is selected from the group consisting of hydrogen and alkyl;

11 R<sup>2</sup> is selected from the group consisting of hydrogen, alkyl, and an amine 12 protecting group, or R<sup>1</sup> and R<sup>2</sup> together form an amine protecting group;

R<sup>3</sup> is selected from the group consisting of alkyl, and a hydroxy protecting

each of Y<sup>1</sup>, Y<sup>2</sup>, Y<sup>3</sup>, Y<sup>4</sup>, Y<sup>5</sup>, and Y<sup>6</sup> is independently selected from the group consisting of hydrogen, halide, alkyl, -OR<sup>4</sup>, wherein each R<sup>4</sup> is independently selected from the group consisting of hydrogen, alkyl, and a hydroxy protecting group or two R<sup>4</sup> groups form a diol protecting group, or Y<sup>2</sup> and Y<sup>4</sup> together with the carbon atoms to which they are

19 attached to and C-3 carbon atom of the carbohydrate ring form a five-to seven membered

20 ring.

- 1 14. The process of Claim 13, wherein R<sup>1</sup>, R<sup>2</sup>, Y<sup>1</sup>, Y<sup>2</sup>, Y<sup>4</sup>, and Y<sup>6</sup> are 2 hydrogen, and Y<sup>3</sup> and Y<sup>5</sup> are -OR<sup>4</sup>.
- 1 15. The process of Claim 14, wherein R<sup>4</sup> are hydrogen.
- 1 16. The process of Claim 15 further comprising producing a PPG
- 2 phosphoramidite of the formula:

6

7

8 9

11

12

13

4 from said hydropyrazolopyrimidine nucleoside,

5 wherein

R<sup>1</sup> is hydrogen and R<sup>2</sup> is an amine protecting group or R<sup>1</sup> and R<sup>2</sup> together form an amine protecting group; and

one of  $R^9$  and  $R^{10}$  is a phosphoramidite and the other is a hydroxy protecting group,

said PPG phosphoramidite producing step comprises:

(a) (i) contacting said hydropyrazolopyrimidine nucleoside with an amine protecting reagent under conditions sufficient to produce an amine-protected nucleoside of the formula:

14

15 (ii) contacting said amine-protected nucleoside with a hydroxy

16 protecting reagent under conditions sufficient to produce an

amine/monohydroxy protected nucleoside of the formula:

18

19 or

20 (i) contacting said hydropyrazolopyrimidine with a hydroxy
21 protecting reagent under conditions sufficient to produce a

22 monohydroxy protected nucleoside of the formula:

26

24

(ii) contacting said monohydroxy protected nucleoside with an amine protecting reagent under conditions sufficient to produce an amine/monohydroxy protected nucleoside of the formula:

27

wherein

R<sup>1</sup> is hydrogen and R<sup>2</sup> is an amine protecting group or R<sup>1</sup> and R<sup>2</sup>
together form an amine protecting group; and
one of R<sup>7</sup> and R<sup>8</sup> is hydrogen and the other is a hydroxy protecting
group;

33 and

34

35

1

2

3.

1

2

1

2

- (b) contacting said amine/monohydroxy protected nucleoside with an activated phosphoramidite under conditions sufficient to produce said PPG phosphoramidite.
- 17. The process of Claim 16, wherein said amine protecting reagent is selected from the group consisting of N,N-dialkylformamide dialkylacetal, and N,N-dialkylacetamide dialkylacetal.
- 18. The process of Claim 16, wherein said hydroxy protecting reagent is a photolabile hydroxy protecting reagent.
- 1 19. The process of Claim 18, wherein said photolabile hydroxy protecting reagent is selected from the group consisting of 1-(3,4-methylenedioxy-6-nitrophenyl)ethyl chloroformate, 2-(2-nitrophenyl)-2-methylethyl chloroformate, 2-(2-nitro-6-chlorophenyl)-2-methylethylsulfonyl chloride and 3',5'-dimethoxybezoinoxyl chloroformate.
  - 20. The process of Claim 16, wherein said hydroxy protecting reagent is an acid labile hydroxy protecting reagent.

- 1 The process of Claim 20, wherein said acid labile hydroxy protecting 21. 2 reagent is selected from the group consisting of trityl halide, monomethoxytrityl halide and
- 3 dimethoxytrityl halide.
- The process of Claim 16, wherein said activated phosphoramidite is of 22. 1
- 2 the formula:

$$(i-Pr)_2N$$
 $P$ 
 $X^2$ 
 $OCH_2CH_2CN$ 

wherein 4

3

X<sup>2</sup> is a leaving group. 5

- The process of Claim 22, wherein X<sup>2</sup> is selected from the group 23. 1 2 consisting of halide and diisopropylamino.
- The process of Claim 22, wherein R<sup>9</sup> is dimethoxytrityl and R<sup>10</sup> is a 24. 1 phosphoramidite moiety of the formula -P[N(i-Pr)<sub>2</sub>]OCH<sub>2</sub>CH<sub>2</sub>CN. 2
- 1 25. The process of Claim 13 further comprising producing said nucleoside 2 of Formula I, wherein said nucleoside of Formula I producing step comprises: 3
  - contacting an iodopyrazolopyrimidine of the formula:

5 with an activated sugar of the formula:

9

1

4

under conditions sufficient to produce said nucleoside of Formula I, 7

8 wherein

R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, Y<sup>1</sup>, Y<sup>2</sup>, Y<sup>3</sup>, Y<sup>4</sup>, Y<sup>5</sup>, and Y<sup>6</sup> are those defined Claim 13; and

X<sup>1</sup> is a leaving group. 10

26. The process of Claim 25 further comprising producing said 2 iodopyrazolopyrimidine nucleoside of Formula I from a pyrimidinone of the formula: HN NOH

3

said iodopyrazolopyrimidine nucleoside producing process comprising:

5 (i) contacting said pyrimidinone with a halogenating agent and a

6 formylating agent under conditions sufficient to produce a dihalopyrimidine carboxyaldehyde

7 of the formula:

8

wherein

each X<sup>3</sup> is independently selected from the group consisting of F, Cl, Br and I;

(ii) contacting said dihalopyrimidine carboxyaldehyde with hydrazine

under conditions sufficient to produce a halopyrazolopyrimidine of the formula:

13

12

14 (iii) contacting said halopyrazolopyrimidine with an alkoxide of the

15 formula R<sup>3</sup>-OM, wherein R<sup>3</sup> is alkyl and M is a metal, to produce an

16 alkoxypyrazolopyrimidine of the formula:

17

1

2

1

2

18 and

19 (iv) iodinating said alkoxypyrazolopyrimidine with an iodinating agent

20 under conditions sufficient to produce said iodopyrazolopyrimidine.

1 27. The process of Claim 26, wherein said halogenating agent is selected

2 from the group consisting of POCl<sub>3</sub>, iodine monochloride, N-iodosuccinamide and SOCl<sub>2</sub>.

28. The process of Claim 26, wherein said formylating agent is a

compound comprising a formyl group attached to a secondary amino group.

29. The process of Claim 28, wherein said formylating agent is selected

from the group consisting of dimethyl formamide, 1-formylpiperidine, 1-formylmorpholine

3 and triformamide.

- 1 30. The process of Claim 26, wherein said iodinating agent is selected
- 2 from the group consisting of iodine monochloride and N-iodosuccinimide.
- 1 31. A process for producing a nucleoside comprising:
- 2 (a) contacting an iodopyrazolopyrimidine of the formula:

4 with an activated sugar of the formula:

$$R^5O$$
 $Q$ 
 $X^1$ 

- 6 under conditions sufficient to produce an deoxy iodopyrazolopyrimidine nucleoside of the
- 7 formula:

8 9

3

5

- (b) producing an amino dihydro hydropyrazolopyrimidine nucleoside from
- said deoxy iodopyrazolopyrimidine nucleoside, wherein said amino dihydro
- 11 hydropyrazolopyrimidine nucleoside is of the formula:

12

- 13 wherein
- 14 R<sup>3</sup> is alkyl;
- R<sup>5</sup> and R<sup>6</sup> are hydroxy protecting groups; and
- 16 X<sup>1</sup> is a leaving group.
- 1 32. The process of Claim 31, wherein said step of producing said amino
- 2 dihydro hydropyrazolopyrimidine nucleoside comprises removing said hydroxy protecting
- 3 groups R<sup>5</sup> and R<sup>6</sup>; hydrolyzing -OR<sup>3</sup> group; and reducing the iodine.

- 33. The process of Claim 31 further comprising:
- 2 (c) contacting said amino dihydro hydropyrazolopyrimidine nucleoside
- 3 with an amine protecting reagent under conditions sufficient to produce an amine protected
- 4 nucleoside of the formula:

7

1

- (d) contacting said amine protected nucleoside with a hydroxy protecting reagent under conditions sufficient to produce an amine/monohydroxy protected nucleoside
- 8 of the formula:

9

10 and

- (e) contacting said amine/monohydroxy protected nucleoside with an
- 12 activated phosphoramidite of the formula:

13

under conditions sufficient to produce a PPG phosphoramidite of the formula:

15

16 wherein

- 17 R<sup>1</sup> is hydrogen;
- 18 R<sup>2</sup> is an amine protecting group;
- or R<sup>1</sup> and R<sup>2</sup> together form an amine protecting group;

- 20 R<sup>4</sup> is a hydroxy protecting group; and 21 X<sup>2</sup> is a leaving group.
  - 1 34. The process of Claim 33, wherein X<sup>2</sup> is selected from the group 2 consisting of halide, and -N(i-Pr)<sub>2</sub>.
- 1 35. The process of Claim 33, wherein R<sup>1</sup> and R<sup>2</sup> together form a nitrogen protecting group of the formula: =CH-N(CH<sub>3</sub>)<sub>2</sub>.
- 1 36. The process of Claim 35, wherein R<sup>4</sup> is selected from the group 2 consisting of an acid labile hydroxy protecting group and a photolabile hydroxy protecting 3 group.
- 37. The process of Claim 36, wherein R<sup>4</sup> is selected from the group
   consisting of dimethoxytrityl, trityl, pixyl, 1,1-bis(4-methoxyphenyl)-1-pyrenylmethyl, α methyl-6-nitropiperonyloxycarbonyl, 2-(2-nitrophenyl)-2-methylethoxycarbonyl, 2-(2-nitro 6-chlorophenyl)-2-methylethylsulfonyl and 3',5'-dimethoxybezoinoxycarbonyl.
  - 38. The process of Claim 31, wherein said step (b) comprises reducing the iodide by hydrogenation.
- 1 39. The process of Claim 31, wherein said iodopyrazolopyrimidine is 2 produced from a pyrimidinone of the formula:

4 said iodopyrazolopyrimidine producing step comprising:

1

2

3

5

6

7

8

10

11

(i) contacting said pyrimidinone with a halogenating agent and a formylating agent under conditions sufficient to produce a dihalopyrimidine carboxyaldehyde of the formula:

9 wherein each X<sup>3</sup> is independently selected from the group consisting of F, Cl, Br and I;

(ii) contacting said dihalopyrimidine carboxyaldehyde with hydrazine under conditions sufficient to produce a halopyrazolopyrimidine of the formula:

(iii) contacting said halopyrazolopyrimidine with an alcohol of the formula

R<sup>3</sup>-OH to produce an alkoxypyrazolopyrimidine of the formula:

15

16 and

- 17 (iv) iodinating said alkoxypyrazolopyrimidine with an iodinating agent 18 under conditions sufficient to produce said iodopyrazolopyrimidine.
- 1 40. The process of Claim 39, wherein said halogenating agent is selected 2 from the group consisting of POCl<sub>3</sub>, iodine monochloride, N-iodosuccinamide and SOCl<sub>2</sub>.
- 1 41. The process of Claim 40, wherein said halogenating agent is selected 2 from the group consisting of POCl<sub>3</sub> and SOCl<sub>2</sub>.
- 1 42. The process of Claim 39, wherein said formylating agent is selected 2 from the group consisting of dimethyl formamide, 1-formylpiperidine, 1-formylmorpholine 3 and triformamide.
- 1 43. The process of Claim 39, wherein said iodinating agent is selected 2 from the group consisting of iodine monochloride and N-iodosuccinimide.
